TRADE INFORMATION - June-2009

Product Name : **FLEX BALL**

Use in archery : Anti-vibrations - stabilizer damper device. Is used between the stabilizer end and weight or between bow and weight.

TECHNICAL INFORMATION

Size : 3/4" diameter
 Threads : 1/4 male , 1/4 female.
 others threads :
 5/16 male, 5/16 female.
 1/4 male , 5/16 female
 5/16 male , 1/4 female
 M8 male , M8 female.

Remove existing "O" rings actually between end stabilizer and weight. The FlexBalls are a "O" ring itself.
 The FlexBalls are straight, but flexible, and is developed for use in a normal way, in static position. Avoid lean artificially.

INNER CORE .

The most important part of the FlexBall is specifically designed and manufactured with a special material for the best vibrations absorption capacity from the stabilizers natural vibrations during the shoot.

OUT CORE .

The very flexible cover prevent max movements from archer to stabilizers during-after shoot.
